**Subject:** Take a Closer Look at the GlobalChem Conference & Exhibition

## Take a Closer Look at the Topics Discussed at GlobalChem.

For over 30 years, [GlobalChem](#) has been the chemical industry's premier policy and regulatory conference of its kind. Each year, this annual gathering of industry professionals offers a valuable opportunity to review key developments in the global chemicals management arena while looking ahead to some of the most pressing issues the industry faces.

While the new year shifts the focus of [GlobalChem](#) to the **Frank R. Lautenberg Chemical Safety for the 21st Century Act (LCSA)**, the conference also features a robust international component. Sessions include:

- **New International Model for Risk-Based Chemical Regulation**

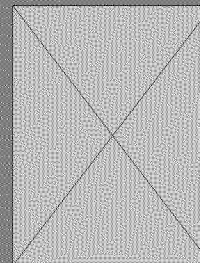

Regulatory activity on chemicals at the national level in countries around the world is surging and LCSA is the most recent example of a chemicals management framework. The concepts and principles of the LCSA legislation compare favorably to the approach taken in the Canadian Chemical Management Plan (CMP). This session will explore how this model of chemical regulation can be leveraged as a more efficient and effective system for ensuring the safety of human health and the environment while simultaneously reducing Non-Tariff Barriers and stimulating growth, innovation, and trade.

- **Chemistry, SAICM, and the 2030 Agenda for Sustainable Development**

The adoption in 2015 of the 2030 Agenda for Sustainable Development, which includes the UN Sustainable Development Goals (SDGs), has considerable relevance for the chemical industry. The SDGs contain several targets and indicators with direct applicability to chemicals management. In addition, products and technologies enabled by chemistry will be essential for addressing a wide range of other SDG elements. Related to this, the UN's Strategic Approach to International Chemicals Management (SAICM), is starting a process to consider the future of global efforts to promote the sound management of chemicals after SAICM's current mandate expires in 2020. How does the future of global chemicals management relate to the 2030 Agenda for Sustainable Development? What role might "green" or "sustainable" chemistry play in this regard? And what does this

### Conference Host Hotel

GlobalChem is proud to return to Washington, DC and call the OMNI Shoreham hotel its host for 2017. [Click here for more information](#), including ACC's special room rates which expire **January 30**

### Download the 2017 **GlobalChem Exhibition**

GlobalChem isn't just an educational opportunity, it's also a great forum for you to meet representatives from companies that already

mean for the chemical industry? This session will discuss developments in relevant global forums, and offer perspectives from a range of different stakeholders.

#### **Optional Workshop on LCSA & International Fundamentals**

GlobalChem's annual Fundamentals Workshop provides a unique educational opportunity for conference attendees. For 2017, the workshop will cover the differences between the old Toxic Substances Control Act (TSCA) and the new LCSA.

The various programs discussed in the morning will include Inventory Reset; New Chemicals and Significant New Uses; Confidential Business Information (CBI); PMN Preparation; and Risk Assessment; among others. The afternoon of the workshop aims to cover international topics such as EU REACH; Korea REACH; China NCN; GHS Fundamentals; and OSHA Enforcement.

The workshop is ideal for newcomers to the chemical regulations arena as well as seasoned veterans looking for a refresh of what has and has not changed in TSCA and key international issues.
